[CAME.COM](https://www.came.com)

A hand is shown interacting with a black, square-shaped wall-mounted tablet. The tablet's screen displays a video call with a woman wearing a hat. The background is a plain, light-colored wall.

XTS

INNOVATE WITH STYLE

Excellent quality of the components, cutting-edge technologies, maximum attention to construction details, powerful and flexible software.

**Innovation comes to life
in an exceptional design product.**

FURNISHING WITH SIMPLICITY

XTS is a touch screen monitor with a modern design, with essential lines and reduced dimensions. Available in 2 versions, with 5" or 7" monitor and in two finishes: **Black or white**.

The innovative system for clamping to the wall is based on a series of powerful magnets, for a simple but at the same time extremely safe installation.

INSTALLATION**

CONNECT SAFELY

An integrated Wi-Fi card allows to connect XTS to any router, in order to use additional services available thanks to the internet.

In this way, without additional costs, it is possible to enable remote management from the system through the CAME Connect platform.

All data is managed on the CAME Cloud which guarantees the highest level of security and reliability.

A unique device, compatible with X1, XIP and IP360 systems, to create any type of system, from the single villa to the large apartment block setting.

CAMECONNECT
CLOUD CONNECTED TECHNOLOGY

CONTROL FROM YOUR SMARTPHONE

Through the internet connection, it is possible to manage the main smartphone functions:

- Receive calls and respond to visitors
- Open the electrically operated doors or switch on the entrance lights
- View the real time images of the camera on the video door station
- Communicate in video call through XTS

Each device includes 4 App licenses.

The XTS 7 IP version includes 19 App licenses.

ENHANCE EVERY IMAGE

XTS uses the best technologies on the market to improve image quality and visual experience during the conversation.

OPTICAL BONDING TECHNOLOGY

- REDUCTION OF REFLEXES in every natural or artificial light situation.
- GREATER STRENGTH result of the sophisticated layers overlapping process.
- EXCELLENT RESISTANCE to scratches and to the penetration of dust and liquids.
- ANTI-FOG SYSTEM thanks to the assistance of air between the display and glass screen.
- BEST TOUCH SENSITIVITY for precise touch-screen control.

WITH OPTICAL BONDING

WITHOUT OPTICAL BONDING

NOTE
HD video quality can only be achieved on IP models.

IMPRESS WITH INTELLIGENCE

01 VIDEO RECORDING

The REC button allows you to record audio and video of the current call, to be able to save the file and see it at a later time.

02 VOICEMAIL

You can set a message to be used as an automatic reply. The videos of the answers are saved directly in the internal memory of the device and, if required, transmitted in streaming to a mobile device, without the need to store data on a cloud.

03 CONCIERGE FUNCTION

XTS allows you to manage the communication between porters and apartment block residents through internal calls, private messages and general notices. It is indeed possible to choose whether to send text messages to all the residents or only to specific recipients, ensuring total protection of sensitive data and offering maximum confidentiality.

04

CCTV INTEGRATION

XTS can be used as a video surveillance system monitor, to control cameras in real time or to get a complete view of the exterior, in addition to the camera on the video door station.

05

AUTOMATIC DOOR OPENING

The device allows you to set the automatic door opening for each call. This function is very useful in places open to the public, and can be configured according to programmed times.

06

ALERTS

The operating system allows you to check the date and time of each missed call. In stand-by mode, a warning LED flashes to indicate the presence of missed calls or voicemail messages.

CUSTOMIZE WITHOUT LIMITS

GRAPHIC INTERFACE

The XTS interface in the IP version can be customized according to the specific needs of the user. The customized layout can be used for a single device, or, in the case of multiple systems, for all internal receivers of the same building or residence.

IMAGES

The photo to be used in the background on the home page, as well as the background of each page, can be chosen from an existing library or uploaded directly by the user. In the case of different access points, you can use the real photo of each entrance to customize the dedicated page, so as to make it easily recognizable.

BUTTONS AND FUNCTIONS

The configuration software allows to create customized icons and buttons, which can be positioned inside the page at the user's discretion. It is also possible to remove unused buttons or leave the screen free of any icon, for an elegant and refined effect.
